Error Types

Errors were broken down into the following categories

- Office Error Calculation – this was used when it was clear that error flowed from a calculation error in the office
- Office Error Check – this was used where it was obvious that the error should have been caught by a check but was not used when it was a calculation error (e.g. wrong lot number on plan, wrong unit number on condo plan)
- Office Error Search – this was used where there was a lack of information that would have been available with a reasonable search (e.g. title search, municipal by-law search)
- Field Error – this was used where there was admission that the error was in the field (even though it should have been caught by a check)
- Communication - used where internal and/or external communications caused the error (e.g. wrong version used)
- No observable error
- Other – errors not covered above
- Unknown – the surveyor did not provide enough information to derive a source of error
